POLYPHONIC SYNTHESIZER

Software User Manual

Version 1.0

End User License Agreement (EULA)

Do not use this product until the following license agreement is understood and accepted. By using this product, or allowing anyone else to do so, you are accepting this agreement.

UVX-10P (henceforth 'the Product') is licensed to you as the end user. Please read this Agreement carefully. You cannot transfer ownership of these Sounds and Software they contain. You cannot re-sell or copy the Product.

LICENSE AND PROTECTION

1. License Grant

UVI grants to you, subject to the following terms and conditions, a non-exclusive, non-transferable right to use each authorized copy of the Product.

The product is the property of UVI and is licensed to you only for use as part of a musical performance, live or recorded. This license expressly forbids resale or other distribution of the sounds and software included in the Product or their derivatives, either as they exist on disc, reformatted for use in another digital sampler, or mixed, combined, filtered, resynthesized or otherwise edited, for use as sounds, multi-sounds, samples, multi-samples, wavetables, programs or patches in a sampler, microchip or any hardware or software sample playback device.

You cannot sell the Product content or give it away for use by others in their sampling or sample playback devices. In the event UVI terminates this agreement due to your breach, you agree to return the original and all other copies of the software and documentation to UVI.

UVI reserves all rights not expressly granted to herein.

2. Protection of Software

You agree to take all reasonable steps to protect the product and any accompanying documentation from unauthorized copying or use. You agree not to modify the product to circumvent any method or means adopted or implemented by UVI to protect against or discourage the unlicensed use of copying of the Product.

3. Ownership

As between you and UVI, ownership of, and title to, the enclosed digitally recorded sounds (including any copies) are held by UVI. Copies are provided to you only to enable you to exercise your rights under the license.

4. Term

This agreement is effective from the date you open this package, and will remain in full force until termination. This agreement will terminate if you break any of the terms or conditions of this agreement. Upon termination you agree to destroy and return to UVI all copies of this product and accompanying documentation.

5. Restrictions

Except as expressly authorized in this agreement, you may not rent, sell, lease, sub-license, distribute, transfer, copy, reproduce, display, modify or time share the enclosed product or documentation.

UVX-10P

Introduction

UVX-10P

Crown of an Analog Dynasty

In 1985 the world was introduced to the JX-10, a 12-voice, 24-oscillator analog synthesizer par excellence and the last true analog synth of its lineage. Following in the footsteps of the JX-8P and JX-3P, the Super JX was fashioned with a sparse aesthetic. A lack of knobs made the system a bit of a chore to program but an external controller [the PG800] could be attached, cheerfully reuniting synthesists with the immediacy and rapid programming speed of the ever-popular Jupiter and Juno lines. The JX-10 is known for an immense and capable analog sound, even some digital textures; it's simply a magnificent synth. Programming capabilities were equally rich with independent control of 2 DCOs per voice, 2 EGs, 2 VCFs, onboard chorus and even a sequencer [albeit a limited one].

UVX-10P was designed to deliver on all of the strengths of the JX series with none of the weaknesses. We started with a pristine JX-10, MKS-70, and JX-8P and set off, tirelessly programming and sampling these beauties in high-resolution through a world-class signal chain. As with the UVX-3P we made every sample twice, with and without the built-in chorus, providing an authentic and versatile foundation. This sonic backbone paired with the UVI Engine results in a lush and extravagant analog sound; faithful to the hardware with a modern studio bite. UVX-10P delivers a fully-featured and fully-programmable interface sporting ADSR control of our high-quality amp and multimode filter designs, multiple effects, LFO and step modulator, a tediously crafted library of 170+ patches and even original wave samples for you to create your own programs with.

Getting Started

▶ What's a UFS File?

UFS is UVI's monolithic instrument file format.

All required assets for an instrument including samples, presets, scripts, FX and impulse responses are contained within a single UFS file. This approach allows for an extremely simple workflow with minimal overhead for file management and updating.

▶ What's an iLok?

An iLok is a small USB key that stores licenses for software and instruments including all UVI instruments, sound libraries and effects. You'll need an iLok key to use this product.

Compatibility

- ▶ Stand Alone
- ▶ AU, VST, MAS, AAX

Minimum System Requirements

- ▶ Intel CPU
- ▶ 4 GB of RAM
- ▶ 9 GB of disk space
- ▶ MAC OS X 10.7 or higher
- ▶ 7200rpm HD or SSD recommended
- ▶ UVI Workstation 2 or MOTU MachFive 3
- ▶ iLok (1st or 2nd gen)

Compatibility

- ▶ Stand Alone
- ▶ VST, RTAS, AAX

Minimum System Requirements

- ▶ Core Duo or faster
- ▶ 4 GB of RAM
- ▶ 9 GB of disk space
- ▶ Windows Vista or higher
- ▶ 7200rpm HD or SSD recommended
- ▶ UVI Workstation 2 or MOTU MachFive 3 installed
- ▶ iLok (1st or 2nd gen)

Installation

► Installation

If you purchased a boxed product (USB stick) please attach it to your computer and copy the UFS file to this location:

on Mac: /Library/Application Support/UVISoundBanks

on Windows: C:\Program Files\UVISoundBanks

If you purchased a download product please be aware that it has been compressed in RAR format to speed transfer.

The UFS file will need to be uncompressed before installation.

There are a number of freeware RAR utilities available for both Mac and Windows platforms. We recommend The Unarchiver (Mac) and WinRAR (Windows)—links to both of these can be found on our FAQ in the UFS Installation section, here:

<http://www.uvi.net/en/content/124-faq>

Once you have uncompressed the UFS file

please copy it to this location:

on Mac: /Library/Application Support/UVISoundBanks

on Windows: C:\Program Files\UVISoundBanks

► Saving UFS files in a Custom Folder

If you prefer to store your UFS files in a different folder or on a different hard drive even, feel free—it's simple to configure:

1. Open UVI Workstation/MachFive 3 and go to 'Preferences'

2. Click the 'Sound Banks' tab

3. Add a new folder for UVIWS/MF3 to scan

Please note: if you add a custom location you will need to restart UVIWS/MachFive to scan the new directory and load the enclosed sound banks

► Loading an Instrument

Once you've installed the UVX-10P UFS open

UVI Workstation or MachFive 3 and do the following:

1. Double-click the browser screen

2. Locate UVX-10P in the Soundbank tab

3. Select the desired instrument and double-click a patch

The instrument loads and you're ready to jam!

User Interface - Edit Page

The UI is divided into two pages; [Edit] and [Mod]. Main controls such as amp, filter, stereo, pitch and effects are available on the [Edit] page. Clicking the [Mod] button at the top of the interface reveals the second page of controls, where you can access the LFO and Step Modulator. Presets are accessible directly through the browser in UVI Workstation/MachFive.

1 ► Globals + Page

- » **Mono**
Disables polyphony if active
- » **Arp**
Toggle built-in arpeggiator on/off
[additional controls available in UVIWS/MF arp page]
- » **Edit**
Sets the UI to the Edit page
- » **Mod**
Sets the UI to the Mod page

2 ► Filter

- » **ADSR**
Typical envelope controls for the filter
- » **Vel Sens**
Adjust the filter velocity sensitivity
- » **Depth**
Depth of the filters EG
- » **Cutoff Freq**

Filter cutoff frequency

- » **Resonance**
Filter resonance amount
- » **Filter Type**
Multimode filter can be set to low-pass (LP), band-pass (BP), or high-pass (HP)

3 ► Amp

- » **ADSR**
Typical envelope controls for the amp
- » **Vel Sens**
Adjust the amp velocity sensitivity
- » **Vel > Atk**
Remaps Attack to Note Velocity

4 ► Modwheel

- » This section provides a quick way to map common controls to your MIDI keyboards modwheel
- » **Vibrato**
Speed of the vibrato (free)

» Tremolo

Speed of the tremolo (sync)

» Filter

Cutoff frequency of the Filter

5 ► Effects

- » **Drive**
Adjust drive value
- » **Phaser**
Adjust effect mix amount
- » **Delay**
Adjust effect mix amount
- » **Reverb**
Adjust effect mix amount

6 ► Noise

- » **Amount**
Adjust noise mix amount
- » **White/Pink**
Select white or pink noise types

User Interface - Edit Page [continued]

7 ► Stereo

- » **Color**
Utilizes neighboring samples from the library to a unique effect
- » **Spread**
Sets the stereo width (in ALT and UNI modes only)
- » **Detune**
Detunes the unison layers (UNI mode only)
- » **Mode - Off**
Sets the stereo mode to OFF (monophonic)

- » **Mode - Alt**
Sets the stereo mode to ALT; stereo position alternates L/R every note, width controlled by [SPREAD]
- » **Mode - Uni**
Sets the stereo mode to UNI; layers multiple samples and augments them for increased stereo presence, modify with [COLOR] and [DETUNE]
- » **Mode - Chorus**
Activates hardware Chorus layer

8 ► Pitch

- » **Depth**
Sets the depth of portamento [Poly]
- » **Time**
Sets the glide time for both modes

User Interface - Mod Page

1 ► LFO

- » **Sync**
Toggle LFO sync to host tempo
- » **Shape**
Select the LFO waveform: Sine, Square, Triangle or Sample & Hold (random)
- » **Speed**
Set the LFO speed
- » **EG Depth**
Set the depth of the LFO envelope
- » **Attack**
Set the LFO envelope attack time
- » **Decay**
Set the LFO envelope decay time
- » **> Pitch**
Set the pitch modulation amount
- » **> Drive**
Set the drive modulation amount
- » **> Volume**
Set the volume modulation amount
- » **> Filter**
Set the filter modulation amount

2 ► Step Modulator

- » **Res**
Set the step speed/resolution
- » **Steps**
Set the number of steps to playback
- » **Delay**
Set the initial delay time
- » **Rise**
Set the time to activate smooth
- » **Smooth**
Interpolates sub-step values for a smooth modulation
- » **> Volume**
Set the volume modulation amount
- » **> Filter**
Set the filter modulation amount
- » **Step Value**
Set the per-step value (draw with mouse, double-click to enter explicit values)

► Saving Presets

- » **UVI Workstation**
 1. Click the [Multimode] button in the main toolbar
 2. Click the [Wrench] icon
 3. Select 'Save Multi'
- » **MachFive3**
 1. Click the [Wrench] icon and save as a Multi (all parts) or as a Program [single]

Settings for both UVI Workstation and MachFive will be saved automatically with your project if you're working within a DAW.

Preset List

Presets

Arpeggios-Steps

Analog Arp
Basecamp Arp
Bass A Googoo
Chaos Ritual
Drive In
Gate One

UVI Workstation: Tips + Tricks

MIDI Learn

Most UVI Workstation parameters can be automated via a convenient MIDI Learn. MIDI Learn allows you to bind a physical MIDI controller to specific parameters within UVI Workstation.

- Any FX tab parameter, Macro Knob or Slider in UVI instruments can use the MIDI Learn feature
- The MIDI controller type and the MIDI Channel assignment will be saved with the multi or with your song in the host sequencer
- Automation is assigned per-part

To use MIDI Learn:

- Right-click the parameter in UVI Workstation that you want to automate
- After the MIDI Learn dialog appears, Trigger the desired MIDI input controller (knob, fader etc.)

To remove a MIDI controller assignment:

Right-click the desired parameter and press "Delete"

Unlimited FX

UVI Workstation offers a wide variety of FX, or effect processors, to cover all your audio processing needs. The FX implementation is robust and includes the ability to insert unlimited FX slots in several stages of the signal flow.

- Click the "FX" tab to open the FX page on the Single view
- In Multi view the FX section is always displayed

Arpeggiator

UVI Workstation comes equipped with a robust arpeggiator. To insert an arpeggiator in a part, you need to display the Single view in the UVI Workstation, then click on the note icon. The arpeggiator can be employed as a pattern gate, arpeggiator, or even an advanced rhythmic processor for your live MIDI performance or sequenced MIDI tracks. Arpeggiators can be inserted in an unlimited number of parts.

Preset Stacking

Thanks to the simplicity of the UVI Workstation you can stack as many preset as you want by simply assign multiple part on the same MIDI channel.

Split, Velocity & Key Switch

		LOKEY	HIKEY	LOVEL	HVEL	KEYSWITCH	STREAMING	OUTPUT
A1	<>	089-HB-Sticks 01a.aif	C-2	G8	1	127	C3	Main Out
A2	<>	Analog Strings	C-2	G8	1	127	None	Main Out
A3	<>	WerMa-Philli.aif	C-2	G8	1	127	None	Main Out
A4	<>	Synth Bass & Synth	C-2	G8	1	127	C3	Main Out
A5	<>	Jazzistic Guitar 4	C-2	G8	1	127	None	Main Out
A6	<>	Lord Full-light	C-2	G8	1	127	C3	Main Out
A7	<>	Inter Keyboard - Disco.aif	C-2	G8	1	127	None	Main Out
A8	<>	Acoustic Toy Medley	C-2	G8	1	127	None	Main Out

The Keyswitch settings allow you to load multiple presets into two or more parts and dynamically play and mute them from your MIDI controller using key switching, note range, velocity range or any combination of the three parameters. This powerful feature gives you a great deal of real-time control.

Scroll Wheel

All knobs can be adjusted with the scroll wheel on your mouse. When you double-click on any knob or slider, you can manually enter or type in the desired value.
